

SELECTION & SPECIFICATION DATA

Generic Type	Solvent free epoxy lining
Description	<p>PLASITE 4500 is a solvent free, flake-reinforced, high performance epoxy coating designed as an internal tank lining for chemical or other commodity storage. It is resistant to a broad range of chemicals such as fuels, salts, alkalis, many acids and some solvents.</p> <p>It is suitable for use in potable water tanks/piping conforming to ANSI/NSF Standard 61 for drinking water components. It also meets AWWA C210 specification.</p>
Features	<ul style="list-style-type: none"> • High impact resistance • Superior adhesion to steel • Resistance to a broad range of chemicals • Can be applied as low as 35°F/2°C • Can be applied as a one-coat 20-60 mil system
Color	Light gray, tile red, white and blue V131
Finish	Gloss
Primer	N/A, coating is applied direct to metal
Dry Film Thickness	<p>508 - 1524 microns (20 - 60 mils) per coat</p> <p>Normally applied in a one coat application at the appropriate film thickness depending on the application, typically 20-25 mils. Higher film thicknesses are used for more aggressive or abrasive conditions.</p>
Coverage Rate	<p>1604 mil sq ft/gal 80 sq ft at 20 mils</p> <p>Allow for loss in mixing and application</p>
VOC Values	As Supplied : 0.0

SELECTION & SPECIFICATION DATA

Approvals	<p>POTABLE WATER USAGE: ANSI/NSF Standard 61 Certified. Refer to www.ul.com, UL File No. MH26118 for specific application and use requirements. <u>Colors available:</u> Light Grey, Tile Red, Blue and White <u>For Ambient Service Temp: 73°(23°C):</u> CURE @70-75°F: 3 days MAX DFT: 50 mils, # coats: 1 RATINGS: Tanks >5 gal; Pipe: >8" diam <u>For Service Temp 95°(35°C):</u> CURE @70-75°F: 7 days MAX DFT: 55 mils, # coats: 1 RATINGS: Pipe: >8" diam <u>For Service Temp 95°(35°C):</u> CURE @70-75°F: 14 days MAX DFT: 63 mils, # coats: 1 RATINGS: Pipe >48" diam <u>For Service Temp 95°(35°C):</u> CURE @70-75°F: 14 days MAX DFT: 84 mils, # coats: 2* RATINGS: Pipe >48" diam <u>For Service Temp 113°(45°C):</u> CURE @70-75°F: 14 days MAX DFT: 50 mils, # coats: 1 RATINGS Pipe >15" diam</p> <p>*24 hours minimum time between coats. After 1st coat, wash surface with water and abrade (de-gloss), followed by water rinsing and drying.</p>
------------------	---

SUBSTRATES & SURFACE PREPARATION

General	Surfaces must be clean and dry. Employ adequate methods to remove dirt, dust, oil and all other contaminants that could interfere with adhesion of the coating
Steel	Cleanliness: Abrasive blast to SSPC-SP10 (minimum) Profile: Minimum 3 mil (75 micron) dense, sharp anchor profile free of peening, as measured by ASTM D 4417. Defects exposed by blasting must be repaired.
Concrete	Clean, dry and remove all loose, unsound concrete. DO not apply coating unless concrete has cured at least 28 days @ 70°F (21°C) or equivalent. Prepare surfaces in accordance with ASTM D4258 Surface Cleaning of Concrete and ASTM D4259 Abrading Concrete. Voids in concrete may require filling and/or surfacing.

MIXING & THINNING

Mixing	Mix each component separately to a smooth uniform consistency. Any settling in the container must be thoroughly scrapped and re-dispersed. Use a Jiffy type mixer and avoid plunging it up and down in the bucket, which can fold air in to the resin causing bubbles to form in the coating after it has been applied.
Thinning	Thinning not recommended Clean up thinner: Thinner #71

MIXING & THINNING

Ratio | 4:1 Ratio (A to B)

Pot Life | 35°F (2°C): 30-40 minutes
75°F (24°C): 15-25 minutes

APPLICATION EQUIPMENT GUIDELINES

Listed below are general equipment guidelines for the application of this product. Job site conditions may require modifications to these guidelines to achieve the desired results.

Airless Spray	<p>Use a fixed ratio (4:1 by volume) plural component spray rig with heated hoppers, heated hoses to mixer manifold through a static mixer to a 50 ft/15.2 m whip hose followed by a silver gun utilizing self-cleaning reverse-a-tips from 0.017-0.035 inches. NOTE: the Part A side should be at a minimum of 110-140°F and the part B side 90-131°F. Use a 3/8" min I.D. material hose Pump Ratio: 30:1 (min) Volume Output: 2.5 g/m (9.5 l/m) (min) Material Hose: 3/8" I.D. min (9.4 mm) Tip Size: 0.017-0.021" (0.43-0.53 mm) Output Pressure: 2000-2500 psi (13.8- 17.2 MPa) *PTFE packings are recommended and available from pump manufacturer.</p>
----------------------	--

APPLICATION CONDITIONS

Condition	Material	Surface	Ambient	Humidity
Minimum	43°C (110°F)	2°C (35°F)	2°C (35°F)	0%
Maximum	60°C (140°F)	43°C (110°F)	29°C (85°F)	85%

This product requires the substrate temperature to be 5°F (3°C) above the dew point. Contact Carboline Technical Service if conditions are not within recommended guidelines.

CURING SCHEDULE

Surface Temp.	Dry to Touch	Firm	Immersion Service, for crude oil, unblended gasoline, and fuel oils	Immersion Service; all other exposures
2°C (35°F)	8 Hours	16 Hours	36 Hours	5 Days
24°C (75°F)	6 Hours	8 Hours	24 Hours	4 Days
38°C (100°F)	2 Hours	3 Hours	12 Hours	3 Days

Based on 50% relative humidity. Plasite 4500 has the propensity to blush during its cure cycle. It is imperative that the blush be removed before top coating or placing this material into potable water service. Before any touch-up or recoat material can be applied, the first coat must be properly prepared for intercoat adhesion.

Recoat Procedure

- The first coat must be cured firm to the touch. Coating on floors must be able to support foot traffic.
- Scrub the coating with soap and water and thoroughly rinse/dry.
- If the coating has cured more than 24-hours, lightly sand or mechanically abrade (de-gloss) the surface and vacuum dust and debris.

CLEANUP & SAFETY

Cleanup | Plasite Thinner #71

CLEANUP & SAFETY

Safety	Ventilation should be used during and after installation. Ventilation can be discontinued once the material has cured. The ventilation equipment should be capable of preventing the solvent concentration from reaching the lower explosion level for the solvents used. The applicator should monitor the exposure levels or use MSHA/NIOSH approved air respirators.
Ventilation	When used in enclosed areas, thorough air circulation must be used during and after application until the coating is cured. The ventilation system should be capable of preventing the solvent vapor concentration from reaching the lower explosion limit for the solvents used. User should test and monitor exposure levels to insure all personnel are below guidelines. If not able to monitor levels, use MSHA / NIOSH approved respirator.
Caution	Fire and explosion hazards: This product contains less than 1% volatile components, however, vapors are heavier than air and can travel long distances, ignite and flash back. Eliminate all Ignitions sources. Keep away from sparks and open flames. All electrical equipment and installations should be made and grounded in accordance with the National Electric Code. In areas where explosion hazards exist, workers should be required to use non-ferrous tools and wear conductive and non-sparking shoes.

PACKAGING, HANDLING & STORAGE

Shelf Life	Part A & B: 6 months The cure mechanism of this product is not affected for a minimum of 24 months. Film build (per coat) decreases with age. Fresh: over 60 mils 3-6 months: 50-30 mils After 6 months: less than 30 mils Follow intercoat preparation requirements.
Shipping Weight (Approximate)	9.3 lbs per gallon
Storage Temperature & Humidity	50-85°F (10-29°C) For the 24-48 hours just prior to use, narrow the storage temperature to 70- 85°F (21-29°C) to facilitate ease of mixing.
Storage	Keep product tightly sealed in original container until ready for use. Store out of direct sunlight.
Packaging	1, 5 and 20 gallon units

WARRANTY

To the best of our knowledge the technical data contained herein is true and accurate on the date of publication and is subject to change without prior notice.
